

CUSTOM MADE FENESTRATED DEVICES

Unsupported body section maximises the available area for fenestrations ^{1, 2}

Repositionable facility enables accurate deployment ^{3, 4}

Patented magnet system can significantly reduce bifurcate body cannulation time³

Repositionable

Anaconda[™] is the world's **FIRST** repositionable stent graft system

Repositionable facility enables accurate deployment and easy repositioning of the graft body ^{3, 4}

Reduced Cannulation Time ³

Patented Magnet Cannulation System

Can significantly reduce cannulation time of the bifurcate body contralateral limb compared with standard cannulation techniques ³

Custom Fenestrated Anaconda[™] Body Configurations

- The Custom Fenestrated Anaconda[™] unsupported body design,
 - maximises the area available for fenestrations ^{1,2}
 - allows flexibility in custom body designs enabling treatment of a wide range of patient anatomies⁵
 - exhibits no column strength to deform fenestrations or stents^{1, 2}
- Open proximal ring stent offers the potential for immediate brachial access after unsheathing ²

Secure

The dual proximal ring stent design with hooks provides excellent sealing function with positive fixation ⁷

Flexible

The multiple independent leg ring stent design,

- Provides maximum flexibility to cater for varying patient anatomies⁷
- Minimises the potential for kinking³
